1. GENERAL INFORMATION

1.1 SCOPE:

This specification covers the delivery requirements for the LCM delivered by Multi-Inno Technology Co.,Ltd to Customer.

1.2 PRODUCT ELEMENT

LCD,FPC, IC.ETC

1.3 MODULE NAME

MI10656A-G

1.4 ENVIRONMENT DESCRIPTION.

RoHS Compliant.

2. OPTICAL DEFINITIONS

2.1 Definition of angle θ and ϕ

2.2 Definition of viewing angle $\phi 1$ and $\phi 2$

2.3 Definition of contrast “K”

2.4 Definition of optical response

**MODEL NO.**

MI10656A-G

4.2 Block diagram

Single Chip Structure (1/65 Duty Configurations)

Figure 38. SHL = 1, ADC = 0

4.3 Instruction

The S6B0724 is a single chip driver & controller LSI for graphic dot-matrix liquid crystal display systems. This chip can be connected directly to a microprocessor, accepts serial or 8-bit parallel display data from the microprocessor, stores the display data in an on-chip display data RAM of 65 x 132 bits and generates a liquid crystal display drive signal independent of the microprocessor. It provides a high-flexible display section due to 1-to-1 correspondence between on-chip display data RAM bits and LCD panel pixels. It contains 65 common driver circuits and 132 segment driver circuits, so that a single chip can drive a 65 x 132 dot display. And the capacity of the display can be increased through the use of master/slave multi-chip structures. These chips are able to minimize power consumption because it performs display data RAM read / write operation with no external operation clock. In addition, because it contains power supply circuits necessary to drive liquid crystal, which is a display clock oscillator circuit, high performance voltage converter circuit, high-accuracy voltage regulator circuit, low power consumption voltage divider resistors and OP-Amp for liquid crystal driver power voltage, it is possible to make the lowest power consumption display system with the fewest components for high

	MODEL NO.	STANDARD DOC
	MI10656A-G	PRODUCT SPEC.

4.4 FEATURES

Display Driver Output Circuits

- 65 common outputs / 132 segment outputs

On-chip Display Data RAM

- Capacity: $65 \times 132 = 8,580$ bits
- RAM bit data "1": a dot of display is illuminated.
- RAM bit data "0": a dot of display is not illuminated.

Applicable Duty Ratios

Duty ratio	Applicable LCD bias	Maximum display area
1/65	1/7 or 1/9	65×132
1/55	1/6 or 1/8	55×132
1/49	1/6 or 1/8	49×132
1/33	1/5 or 1/6	33×132

Microprocessor Interface

- High-speed 8-bit parallel bi-directional interface with 6800-series or 8080-series
- Serial interface (only write operation) available

4.5 Electrical Absolute Maximum Rating

ABSOLUTE MAXIMUM RATINGS

Table 19. Absolute Maximum Ratings

Parameter	Symbol	Rating	Unit
Supply voltage range	V _{DD}	- 0.3 to +7.0	V
	V _{LCD}	- 0.3 to +17.0	V
Input voltage range	V _{IN}	- 0.3 to V _{DD} + 0.3	V
Operating temperature range	T _{OPR}	- 40 to +85	°C
Storage temperature range	T _{STR}	- 55 to +125	°C

NOTES:

1. V_{DD} and V_{LCD} are based on V_{SS} = 0V.
2. Voltages V₀ ≥ V₁ ≥ V₂ ≥ V₃ ≥ V₄ ≥ V_{SS} must always be satisfied. (V_{LCD} = V₀ - V_{SS})
3. If supply voltage exceeds its absolute maximum range, this LSI may be damaged permanently. It is desirable to use this LSI under electrical characteristic conditions during general operation. Otherwise, this LSI may malfunction or reduced LSI reliability may result.

	MODEL NO.	STANDARD DOC
	MI10656A-G	PRODUCT SPEC.

4.6 Function Description

MICROPROCESSOR INTERFACE

Chip Select Input

There are CS1B and CS2 pins for chip selection. The S6B0724 can interface with an MPU only when CS1B is "L" and CS2 is "H". When these pins are set to any other combination, RS, E_RDB, and RW_WRB inputs are disabled and DB0 to DB7 are to be high impedance. And, in case of serial interface, the internal shift register and the counter are reset.

Parallel / Serial Interface

S6B0724 has three types of interface with an MPU, which are one serial and two parallel interfaces. This parallel or serial interface is determined by PS pin as shown in table 8.

Table 8. Parallel / Serial Interface Mode

PS	Type	CS1B	CS2	C68	Interface mode
H	Parallel	CS1B	CS2	H	6800-series MPU mode
				L	8080-series MPU mode
L	Serial	CS1B	CS2	*x	Serial-mode

Serial Interface (PS = "L")

When the S6B0724 is active, serial data (DB7) and serial clock (DB6) inputs are enabled. And not active, the internal 8-bit shift register and the 3-bit counter are reset. Serial data can be read on the rising edge of serial clock going into DB6 and processed as 8-bit parallel data on the eighth serial clock. Serial data input is display data when RS is high and control data when RS is low. Since the clock signal (DB6) is easy to be affected by the external noise caused by the line length, the operation check on the actual machine is recommended.

Figure 3. Serial Interface Timing

	MODEL NO.	STANDARD DOC
	MI10656A-G	PRODUCT SPEC.

Busy Flag

The Busy Flag indicates whether the S6B0724 is operating or not. When DB7 is "H" in read status operation, this device is in busy status and will accept only read status instruction. If the cycle time is correct, the microprocessor needs not to check this flag before each instruction, which improves the MPU performance.

Data Transfer

The S6B0724 uses bus holder and internal data bus for data transfer with the MPU. When writing data from the MPU to on-chip RAM, data is automatically transferred from the bus holder to the RAM as shown in figure 4. And when reading data from on-chip RAM to the MPU, the data for the initial read cycle is stored in the bus holder (dummy read) and the MPU reads this stored data from bus holder for the next data read cycle. This means that a dummy read cycle must be inserted between each pair of address sets when a sequence of address sets is executed. Therefore, the data of the specified address cannot be output with the read display data instruction right after the address sets, but can be output at the second read of data.

4.7 Instruction Description

×: Don't care

Instruction	RS	RW	DB7	DB6	DB5	DB4	DB3	DB2	DB1	DB0	Description
Display ON / OFF	0	0	1	0	1	0	1	1	1	DON	Turn on/off LCD panel When DON = 0: display OFF When DON = 1: display ON

5. QUALITY AND RELIABILITY

5.1 Test Condition

Test should be conducted under the following conditions:

Ambient Temperature: 25 ± 5 °C

Humidity : $60 \pm 20\%$ RH

5.2 Sampling Plan

Sampling method shall be in accordance with inspection level II, normal inspection, and single sampling plan tables for normal tightened, and reduced inspection.

5.3 Acceptable Quality Level

A major defect is a defect that could result in failure or materially reduce that the usability of the unit of product for its intended purpose.

A minor defect is one that does not materially reduce the usability of the unit of product for its intended purpose or is a departure from established standards having no significant bearing on the effective use or operation of the unit.

5.4 Appearance and Checking Standard

5.4.1 Appearance

Appearance test is to be conducted by eyes at approximately 30cm distance from LCD module under the single fluorescent light.

	MODEL NO.	STANDARD DOC
	MI10656A-G	PRODUCT SPEC.

5.4.2 Checking Standard

Inspection level:

Sampling procedure: General inspection levels II and single sampling plans for normal inspection of ISO2859.

Item	Indication	AQL
Major Nonconformity (MA)	Function	0.4
	Size	
Minor Nonconformity (MI)	Effects on LCD appearance but not on function	1.0

5.4.2.1 Inspection condition:

1. The inspection should be done under 40W fluorescent light and visual inspection distance is 30cm.
2. Back-Lights or reflective boards should be adopted for inspecting transmissive LCDs.
3. The visual direction should be viewing angle range
4. This kind of situation will be judged qualificatory one that defection of product in B area won't effect customer's assembly and product quality

Item		Figure 示意图	Criteria 判断标准	MA MI

	MODEL NO.	STANDARD DOC
	MI10656A-G	PRODUCT SPEC.

7. CAUTION FOR USING LCM

7.1 Precautions in handling LCD Modules

Lcms have been assembled and accurately calibrated before delivery.

Please observe the following criteria when handling.

- A. Do not subject the module to excessive shock.
- B. Do not modify the tab on the metal holder.
- C. Do not tamper with the printed circuit board.
- D. Limit the soldering of the printed circuit board to I/O terminals only.

Do not touch the zebra strip nor modify its location.

7.2 Static electricity warning

LCM uses CMOS LSI technology. Therefore, strict measures to avoid static electricity discharge are followed through all processes from manufacturing to shipping. When handling a LCM, take sufficient care to prevent static electricity discharge as you would any CMOS IC.

- A. Do not take the LCM from its anti-static bag until it's to be assembled.

LCMs are individually packaged in bags specially treated to resist static electricity. When storing, keep the LCM packed in the original bags, or store them in a container processed to be resistant to static electricity, or in an electric conductive container.

- B. Always use a ground strap when handling a LCM.

Always use a ground strap while working with the module, from the time it is taken out of the anti-static bag until it is assembled. If it is necessary to transfer the LCM, once it has been taken out of the bag, always place it in an electric conductive container. Avoid wearing clothes made of chemical fibers, the use of cotton or conductive treated fiber clothing is recommended.

- C. Use a no-leak iron for soldering the LCM.

The soldering iron to be used for soldering the I/O terminals to the LCM are to be insulated or grounded at the iron tip.

	MODEL NO.	STANDARD DOC
	MI10656A-G	PRODUCT SPEC.

D. Always ground electrical apparatuses required for assembly.

Electrical apparatuses required to assemble the LCM into a product, i.e. electrical screw drivers, are to be first grounded to avoid transmitting spike noises from the motor.

E. Assure that the work bench is properly grounded.

F. Peel off the LCM protective film slowly.

The module is attached with a film to protect the display surface from contamination, damage, adhesion of flux, etc. Peeling off this film abruptly could cause static electricity to be generated, so peel the tape slowly.

G. Pay attention to the humidity in the work area. 50~60% RH is recommended.

7.3 Storage

If the correct method of storage is not followed, deterioration of the display material (polarizer) and oxidation of the I/O terminal plating may make the process of soldering difficult. Please comply with the following procedure.

A. Store in the shipping container.

B. If the shipping container is not available, place in anti-static bags and seal the opening.

C. Store the modules where they are not subjected to direct sunlight or a fluorescent lamp.

D. Store in a temperature range of 0°C – 35°C with low relative humidity.

7.4 Caution

A. Do not give any external shock.

B. Do not wipe the surface with hard materials.

C. Do not apply excessive force on the surface.

D. Do not expose to direct sunlight or fluorescent light for a long time.

E. Avoid storage in high temperature and high humidity.

F. When storage for a long time at 40°C or higher is required, R/H should be less than 60%.

Liquid in LCD is hazardous substance. Do not lick, swallow when the liquid is attached to your hands, skin, clothes etc. Wash it out thoroughly.
